

## Lab 02

### Getting Started

1. Start MATLAB
2. On the **HOME** tab, in the **ENVIRONMENT** section, click **Layout**, then **Default**.<sup>1</sup>

3. Consider the **Command Window**.

### Numbers

4. Which of the following numbers are/not acceptable in MATLAB? If not, state why.

9,87	not acceptable because of the comma
-356231	
3.57*e2	
3.57e2.1	
3.57e+2	
3,57e-2	

### Variable

5. Which of the following are/not valid variable names in MATLAB? If not, state why.

What	valid
min*2	
Inf	
pay day	
miXedUp	
'a'one	
a.2	

<sup>1</sup> You may like to try other **Layout** options.

(at Shoubra)

## Arithmetic

6. Translate the following expressions into MATLAB:

$A + \frac{B}{C}$	<u>A+B/C</u>
$A + \frac{B}{A*C}$	_____
$A + \frac{B}{A/C}$	_____
$X^{b^c}$	_____
$B - \frac{B^3}{3!} + \frac{B^4}{4!}$	_____

7. Write the equivalent MATLAB statement for the following:

Add 1 to the value of x and store the result in x.	<u>x = x + 1;</u>
Cube x, add y to this, and store the result in x.	_____
Set g equal to the larger of the two variables e and f.	_____
If d is greater than 0, set x equal to -b.	_____
Divide the sum of a and b by the product of c and d, and store the result in x.	_____

## Syntax

8. What's wrong with the following MATLAB statements?

<code>n + 1 = n;</code>	<u>it is invalid to assign to an expression</u>
<code>Fahrenheit temp = 9*C/5 + 32;</code>	_____
<code>x = sqrt(4,2);</code>	_____
<code>x.1 = 2;</code>	_____
<code>n = 1,345;</code>	_____

## Applications

9. There are eight pints in a gallon and 1.76 pints in a liter.

The volume of a tank is given as 2 gallons and 4 pints.

Write a script that inputs this volume in gallons and pints and converts it to liters.

_____
_____
_____
_____
_____
_____

10. Write some statements in MATLAB that exchange the contents of two variables 'x' and 'y', using only one additional variable 'z'. Is it possible without using any additional variables? If yes, how; otherwise, why?

11. Write a program to calculate  $x$ , where  $x = \frac{-b + \sqrt{b^2 - 4ac}}{2a}$  and  $a = 2, b = 10, c = 12$ .

## Vectors

12. Generate a table of conversions from degrees (first column) to radians (second column). Degrees should go from  $0^\circ$  to  $360^\circ$  in steps of  $60^\circ$ . Recall that  $\pi$  radians =  $180^\circ$ .

13. Write some statements that display a list of integers from 10 to 20 inclusive, each with its square root next to it.
